★ LINCOLN LOG FOUNDATION PLAN SHOWN ABOVE

How to Start Your Building

1st. Pick out the half Logs No. 12. Flat side down, round side up, these half Logs are used to form the front and back of the base of the building.

2nd. Connect the ends of the half Logs with two No. 5 Logs.

3rd. Lay a No. 10 Log over No. 12 at the rear.

4th. Place a No. 1 Log in each of the middle notches of No. 12 at the front and connect them with the No. 5 Logs by two No. 3 Logs.

5th. Follow the numbers shown in the diagram; then read about the other construction features illustrated on this Page and you will be ready to build the structures shown on Pages 3 and 4. Before long you will be designing your own buildings. Rubber bands may be used to hold them together, if desired.

★ A NEW DEVELOPMENT IN LINCOLN LOG CONSTRUCTION is the use of the narrow roof planks No. 39 as beams or girders by placing two of the planks in the opposite notches of a Log, as shown in the above illustrations, and locking the ends together with No. 1 or other Logs. The planks and Logs thus locked together may be placed either vertically or horizontally to build towers, bridges, fences, platforms, etc., as illustrated within. When both ends of a pair of planks are thus locked together, the elasticity of the planks provides enough tension to hold the pieces securely.

★ INTRODUCTION

The building designs shown herein are simple and easy to understand but they represent merely a few suggestions. The possible combinations of Lincoln Logs and Timbers are without end as they are designed on a multiple unit system that is based on a diameter of $\frac{3}{4}$ ". The Logs and Timbers are interlocking at windows, doors and corners to make buildings more solid. The identifying numbers of the Logs, Timbers and other pieces are given on Page 2, actual sizes being shown.

Lincoln Timbers are identical with Large Lincoln Logs except that they are square instead of round. The Logs and Timbers are interchangeable and wherever the word "Log" is used in these instructions, the word "Timber" may be substituted.

★ GABLE AND ROOF CONSTRUCTION

The new patented Lincoln Log gable and roof is illustrated above. When the sides and ends of your building have reached the desired height, place a grooved Log No. 6 on the uppermost Logs at the ends of the building to receive the triangular gable No. 37. Then place the bottom roof planks No. 40 on the lower corners of the gable and against the outer edges of the notches in the slotted Logs, as shown in the diagram, and place other roof planks No. 39 above them on the gables to complete the roof.

★ WHEEL AND AXLE

All of these sets contain wheels which in the early days were made from cross sections of Logs. Among the first things made with wheels were the wheelbarrow, hand truck and the ox cart. Later on man designed the wagon and the automobile. The grooved Logs No. 3 are used as bearings for the axle, No. 45, on the ends of which are placed the wheels, No. 34. These wheels are held securely to the axle by friction while the axle turns freely in the groove. Longer Logs are then placed in the notches of the No. 3 Logs to form the chassis on which the desired body may be constructed.

DIAGRAM OF PIECES—Actual Size

Because of lack of space, the following pieces are not illustrated: Nos. 14 and 15, the same length as No. 9 but having more notches; No. 17 with five pairs of notches; No. 22, the longest Timber, with six pairs of notches; No. 37, the gable; Nos. 41 and 42, the longest roof planks and No. 45, the axle.
